Project Name	Formula 1 Race Intelligence Dashboard
Maximum Marks	5 Marks

Creating an effective dashboard involves thoughtful design to ensure that the presented information is clear, relevant, and easily understandable for the intended audience. Here are some key principles and best practices for dashboard design

Activity 1: Interactive and visually appealing dashboards

Creating interactive and visually appealing dashboards involves a combination of thoughtful design, effective use of visual elements, and the incorporation of interactive features. Here are some tips to help you design dashboards that are both visually appealing and engaging for users so take care of below points

- **Clear and Intuitive Layout** – KPI strip at the top, then the map and reliability charts, then rankings and distributions.
- **Use Appropriate Visualizations** – Bars for rankings, a line for season trends, a pie for tyre share, a treemap for countries, a map for nations and bubbles for podiums.
- **Colour and Theming** – Dark Formula 1 style theme with distinct team colours for each team.
- **Interactive Filters and Slicers** – DNF Reason, Year of Race Date and Top N filters, plus a year checklist.
- **Drill-Down Capabilities** – Tooltips and click-to-highlight let users move from the overview to a single driver or team.
- **Responsive Design** – The dashboard is sized to fill the page width when embedded in the Flask website.
- **Custom Visuals and Icons** – Dark layout containers and a Formula 1 themed header on the web page.
- **Use of Infographics** – KPI cards, a treemap and packed bubbles summarise large data at a glance.

Note: Highlight the major outcomes in form of bullet points

Sample:

Here are the major outcomes from the dashboard:

- **Scale of the data**: The header shows 10 competing teams, 17 seasons in play, 6,464 race outcomes logged and 29 circuits showcased, giving a broad base for the analysis.
- **Top driver**: Max Verstappen leads the Driver Performance Leaderboard with 4,640 points, ahead of Lewis Hamilton (4,491) and Sergio Perez (3,366).
- **Top team**: Red Bull Racing leads the Team Performance Ranking with 8,006 points, followed by Mercedes and Ferrari (6,390). Kick Sauber has the lowest total (363).
- **Race participation**: Bahrain has by far the highest participation at 2,168, ahead of the USA (400) and Hungary, Monaco and Spain (328 each).
- **Tyre usage**: Soft (31.52%), Medium (30.78%) and Hard (30.36%) compounds are used almost equally, while Intermediate makes up only 7.34%.

- **Interactivity**: Users can filter by DNF reason, year and Top N to compare drivers and teams across seasons, and every chart updates together.

Overall outcome: The dashboard shows that Formula 1 success is led by a few strong teams and drivers, that reliability and tyre choices vary across the field, and that results are spread over many countries and seasons.
